

Final Evaluation

Context-Aware Systems

Prof. Marco Di Felice Prof. Angelo Trotta
Department of Computer Science and Engineering
University of Bologna

Final Examination

The examination consists of **two separate parts**

SEMINAR
(individual)

Grade: [Pass, Good, Excellent]

PROJECT
(individual
or team work)

Grade: [18: 30]

IMPORTANT. The final grade is not the average of the grades obtained in the two parts.
The presentation determines the maximum achievable grade, while the final evaluation is determined by the project quality.

Final Examination

The final grade is calculated considering the project grade and the seminar evaluation, based on the following conditions:

1. If the seminar is not taken, the maximum final grade attainable is 23.
2. If the seminar is taken with a Pass evaluation, the maximum final grade attainable is 25.
3. If the seminar is taken with a Good evaluation, the maximum final grade attainable is 28.
4. If the seminar is taken with an Excellent evaluation, the maximum final grade attainable is 30 with honors.

Final Examination

The examination consists of **two separate parts**

SEMINAR
(individual)

Grade: [Pass, Good, Excellent]

PROJECT
(individual
or team work)

Grade: [18: 30]

IMPORTANT. The final grade is not the average of the grades obtained in the two parts.
The presentation determines the maximum achievable grade, while the final evaluation is determined by the project quality.

Final Examination

- The seminar is in an **oral presentation** on a scientific / technological topic related to context-aware systems.
- **15 minutes (STRICT!)** + questions
- Topic can be: (i) *selected by the student* considering the list available on VIRTUALE **for the a.y. 2025/2026** OR (ii) *proposed by the student* (see next slides)
- The topic can be: (i) *illustration of a scientific paper* OR (ii) *review of a software tool*. In the second case, a short **demo** -showing selected functionalities of the tool- is **mandatory**.

Final Examination

- All the students' seminars will be scheduled in these dates:
22 June 2026, 23 June 2026, 24 June 2026

PROCEDURE TO FOLLOW (in case of selection from the list):

1. **Select the topic for the presentation** (clicking on the item with the same id of the paper as listed in the PDF file) by **May 28 2026, 11.55pm**
[NOTE: selection is mutual exclusive, 1 paper can be presented by max 1 student, **First Come First Served**]
2. **Select the preferred day(s)** for the presentation (multiple choices allowed)

The system will open at **May 21 2026, 09:00am.**

Final Examination

DATE SELECTION ON VIRTUALE

Spunta come completato

Apertura: mercoledì, 20 maggio 2026, 09:00

Chiusura: mercoledì, 27 maggio 2026, 23:55

✦✦ Riassumi

Questa è solo un'anteprima delle opzioni disponibili per l'attività. Sarà possibile formulare una scelta dopo l'apertura.

I risultati delle scelte non saranno pubblicati dopo la tua risposta.

☐ 22 Giugno 2026 ☐ 23 Giugno 2026 ☐ 24 Giugno 2026

Final Examination

PAPER SELECTION ON VIRTUALE

Apertura: mercoledì, 20 maggio 2026, 09:00

Chiusura: mercoledì, 27 maggio 2026, 23:55

- ☐ Paper #118 ☐ Paper #119 ☐ Paper #120 ☐ Paper #121 ☐ Paper #122 ☐ Paper #123 ☐ Paper #124 ☐ Paper #125 ☐ Paper #126

Final Examination

- All the students' seminars will be scheduled in these dates:
22 June 2026, 23 June 2026, 24 June 2026

PROCEDURE TO FOLLOW (in case of paper proposed by students):

1. Send email to both the lecturers indicating the **proposed paper/tool and the editorial venue** by **May 28 2026, 11.55pm**. Also select the preferred **dates on Virtuale**. Email subject: [CAS course - paper proposal]
2. The proposed paper must have been published in **2025 or in 2026**

Final Examination

- All the students' seminars will be scheduled in these dates:
22 June 2026, 23 June 2026, 24 June 2026

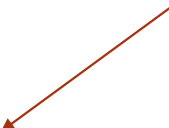

PROCEDURE TO FOLLOW (more):

Send email to both the lecturers in case you are interested on a specific CAS
AND all papers of the list have already been selected **AND** you didn't find any paper of interest from ACM or IEEE Xplore digital libraries.

Final Examination

The examination will be structured into **two distinct parts**
(both **MANDATORY**)

SEMINAR
(individual)

PROJECT
(individual
or group work)

Final Examination

- The project can be developed **individually** or in groups of **maximum 2 units**.
- The project can implement one of three two provided drafts, or a new draft proposed by the student/group. In the first first case, the system specifications (available on VIRTUALE) can be customized/extended, but the overall complexity should not be significantly reduced. In the second case (draft from students), the proposal must be approved by the lecturers. **The originality of the proposal is not matter of evaluation.**
- **No distinction is made in terms of evaluation criteria or required project complexity between individual and group projects. Students choosing to work individually are expected to satisfy the same requirements and implement the same functionalities as groups.** Therefore, the decision to work individually or in a group is entirely left to the students.

Final Examination

- The projects must be submitted exclusively via the Virtuale platform (Section: Project Submission). **Submissions sent via emails or Teams will not be considered.**
- Submit the project when ready. However, we will review the submissions on Virtuale at (the midnight of) these dates:
15 June, 15 July, 15 Sept, 15 Oct, 15 Dec, 15 Jan 2027, 15 Feb 2027.
- All submissions found on Virtuale will be considered for project discussion, which will be scheduled within the next two weeks. **Instructions regarding the date and location of the discussion will be sent via email.**

Final Examination

- Submit a **zip file** containing the **source code** of the project and a **technical report** describing the project design and implementation.
- Sections of the report: Introduction, Project's Architecture, Project's Implementation, Results.
- The report **should be written in English and use the IEEE conference template**, which can be found at: <https://www.ieee.org/conferences/publishing/templates.html>

Final Examination

- In addition to the technical report, the student must prepare **a presentation (with slides) of the project for the oral discussion**. The slides must be submitted on Virtuale (Section: Project Presentation), at least one hour before the discussion.
- The **discussion** (IN PRESENCE!) will involve **presenting the project and demonstrating it using the students' devices**. Questions related to the theoretical part of the course may be asked, either on topics related or unrelated to the project.
- NOTE **All members of the group must be present during the discussion and should have a complete understanding of 100% of the project (code generation tools are NOT allowed, automatic failure)**.

Final Examination

- If the project evaluation is considered sufficient, it generates a grade between 18 and X, where X represents the upper bound determined by the oral presentation (see previous slides).
- If the project evaluation is considered insufficient, the project must be resubmitted in one of the following exam sessions using the same project track.
- **If the project evaluation is considered sufficient but the students refuse the proposed grade, they may submit a new project based on a different specification; resubmission of an improved version of the current project will not be allowed.**

AI Policies

1. **The usage of AI tools for code generation is strongly discouraged.**
2. Students must clearly state in the project report whether AI tools were used during project development, how they were used, which tools, and for which parts of the project.
3. **Comments in the source code are allowed only at the beginning of each file and at the beginning of each function or method.**
4. Projects entirely generated, or generated to a significant extent, using AI tools will be rejected.
5. Students must fully understand all the code they submit. **During the oral discussion, the lecturers will ask questions about any part of the code, including the rationale behind specific design choices, the meaning of individual instructions, invoked APIs, and programming-language syntax.** If the lecturers are not satisfied with the answers, the project may be rejected and the exam considered failed.

Final Examination

- **Special Projects** (some of them mentioned in the document):
 - Research-oriented projects
 - Developed by max 1 student/group
 - Specifications will be provided by lecturers/tutors

Final Examination

For issues not addressed in these slides:

**Contact the lecturers by EMAIL
or by TEAMS**
